Professional Services by Ingenico

With an Ingenico Professional Services consultant leading your project, you gain the expertise, collaboration and oversight that drive business success and customer satisfaction.

Ingenico is your go-to partner, whether you're adopting a new payment technology, upgrading your existing installations or addressing certification, compliance and security requirements.

Payment technology consulting	Payment solution architecture	On site or remote technical support	Solution update / Renewal	Integration, implementation and support	Software and hardware development	Project management

Ingenico, your trusted advisor

- Over 40 years' experience in payment
- Seasoned professional consultants with technical know-how and savvy experience to help you to realize your vision
- You focus on your core strengths while we focus on your solution

Solutions tailored to your needs

- Rolling out a new nationwide POS solution built on customized software? Addressing a single issue like EMV compliancy? Equipping a few locations with new technology? Professional Services can help. We start with your business needs and tailor the right solution to satisfy you

Seamless, simple and stress-free

- All Ingenico services included whatever the scope of your needs
- End-to-end solution from site preparation, kitting, deployment and helpdesk solutions to warranty and repair services

Your single point of contact

- Full management in implementation and operating services by Ingenico
- Coordination of all work streams from customization, integration, certification to deployment
- A dedicated, executive-led program organization

Accelerated time to value

- Experienced professionals who simplify complex projects and cut costs by applying proven components
- Principles of governance applied to deliver repeatable and predictable results that lead to faster time to business value

How we work with you

When you engage Ingenico Professional Services for your payment solution project, your consultant will work with you to define your business goals, skills, gaps and vision of a successful outcome.

We then define the technical architecture that will achieve that vision and design an implementation solution tailored to your specific requirements. As part of this process, we identify the business, resource and technical challenges to project success and how we will work to mitigate these risks.

Before you make any formal commitments, you will understand the full scope of our dedication to your project as well as your contributions. You'll know who will lead your dedicated Ingenico team, the timeline and milestones for execution, and the metrics by which we will measure success.

Your solution proposal will include a statement of work for Professional Services that details the deliverables Ingenico will provide, governance, the validation process and risk management.
